Inaugural Issue of Bioengineering International, peer-reviewed platinum open access journal

We are pleased to announce the launch of a new platinum open access journal entitled *Bioengineering International*. Bioengineering International is a peer-reviewed journal that encourages worldwide academic and scientific researchers to share their original research work, reviews and commentaries. The journal will provide an extensive platform for this interdisciplinary blend of chemistry, biology and materials science, with their synergistic effects on the progress of biomedicine and bioengineering.

The purpose of Bioengineering International journal is to provide comprehensive and facile access to the latest contributions of academic and scientific researchers and to facilitate their publication completely free of charge

including review papers, original research articles, communications and short notes. AMG Transcend Association (Romania) covers all economic costs of the publishing process. Platinum Open Access policy provides permanent free and open access for worldwide readers, both the scientific community and the general public. The Bioengineering International journal will ensure the high visibility of the published papers, by ensuring their appearance in most important scientific databases, such as Scopus (Elsevier), Science Citation Index (Clarivate Analytics), Scilit (MDPI) and Chemical Abstracts (CAS).

Therefore, we encourage all research scientists interested in the field of bioengineering to submit their papers to Bioengineering International.
